

## What is spidernext?

**spidernext** is a platform of cyber defence in Virtual SOC format, based on the web that allows you to centrally monitor and manage the security of your organization in real time. It is the only SOC (Security

Operations Centre), on the market that integrates the ability to identify a possible cyberattack before it occurs, retrieve intelligence information and detect attacks to the reputation of an organization.

## Characteristics

Intuitive platform

Real-time monitoring of hundreds of information sources

Personalized notifications sending

Automatic reports

Information grouping by needs (Security, Intelligence and Reputation)

Non-intrusive (without installing anything)

**spidernext analyses network information in order to maintain the security, maintain the reputation and obtain intelligence data.**

## VSOC spidernext: Integration and modularity

**spidernext** allows bidirectional integration, this means that you can easily integrate other security products and solutions and it also allows easy integration of spidernext into other solutions. The spidernext solution is fully modular, it

adapts to the specific needs of the organization, from small organizations to large corporations. You can hire only the modules you need according to the current needs of your organization.

## VSOC Modules

Monitoring the security of systems and assets

Alerts from Firewalls, electronics and network devices

Data Loss Prevention (DPL) monitoring

Antimalware / EPPs / EDRs tool alerts

Monitoring attacks against reputation and public image

Endpoint security posture monitoring and hardening

Intelligence information monitoring

Integration with SIEMs and other tools

Vulnerability monitoring and analysis

Phishing simulation campaign

## Functions

1

Keep your security thanks to the prevention and the early advanced detection of the possible threats. Anticipate a cyberattack avoids future issues, just as improve the reaction and make difficult the assets loss.

2

Solve future problematic situations and design business strategies, thanks to the intelligence information analysis that is obtained through the platform.

3

Preserve your public image and real recognition, detect information or data that can damage the general perception of your person, company or entity.
